# PVA Watermark Module
For OPENTEXT Content Server & Livelink 9.7.x

Automatically Watermark Your PDF Documents!

The PVA Watermark Module (Watermark) integrates the Appligent StampPDF™ software with Livelink/Content Server, or it can use the Open Text Electronic Signatures (eSign) module. Watermark allows users to dynamically stamp the pages of a PDF document within Livelink/Content Server with any kind of watermarks - page numbers, dates, disclaimers, Livelink/Content Server attributes, etc. – in multiple styles, colors, and positions.

Users create plain text configuration files that specify how the module will apply watermarks to individual PDF files, or folders containing PDF files.

The PVA Watermark module installs in your Livelink/Content Server system just like any OPENTEXT module.

The OPENTEXT *Renditions* module is required for Watermark to function properly.

PVA's Watermark Module is being used by several satisfied customers, including the Coca-Cola Bottling Company, Atlantic LNG, and the Johns Hopkins University Applied Physics Laboratory.
